OBJECTIVE

EXECUTIVE SUMMARY

BUSINESS CONTEXT

Bright Coffee Sales & Commercial Analytics was undertaken to understand how revenue is generated across products, categories, stores and trading periods.

The analysis uses transaction-level sales data to connect revenue, volume, pricing and purchasing behaviour — moving beyond reporting sales activity to understand the commercial drivers behind performance.

BUSINESS OBJECTIVES

- **Revenue & Growth** — Understand how revenue changes across the six-month period and where growth is concentrated.
- **Commercial Drivers** — Identify the products, categories and stores contributing most to revenue and volume.
- **Customer Economics** — Evaluate transaction value, average selling price and units per transaction.
- **Opportunity Identification** — Identify where price, volume, mix and trading-period behaviour can support further growth.

KEY BUSINESS INSIGHT

- The opportunity is not simply to increase sales, but to understand what is driving revenue growth, transaction value and product demand, and where Bright Coffee has untapped commercial potential.
- By connecting product mix, pricing, transaction behaviour, trading time and store performance, Bright Coffee can identify where product strategies, targeted offers and store-level initiatives are most likely to strengthen revenue and warrant further testing.

Bright Coffee — Sales Analysis- Mind Map

The Ask

Objective

Help Bright Coffee understand its sales performance, identify revenue drivers, and uncover opportunities to improve sales.

Workflow

Analytics process

- 1. Business Objective
- 2. Business Questions
- 3. Data Understanding
- 4. Data Preparation
- 5. Analysis
- 6. Insights
- 7. Recommendations
- 8. Visualisation

Insights:

Information derived from the data to support business decisions.

The workflow moves from establishing what is happening to explaining what is driving performance — then translating those findings into commercial actions that can be tested, measured and optimise.

THE SCOPE OF WORK

Integrated Sales, Revenue & Commercial Analytics for Bright Coffee

THE OUTPUTS

THE ANALYTICAL WORK

- Analysed Bright Coffee transaction data to understand revenue and sales trends.
- Assessed revenue performance across products, categories, stores and trading periods.
- Analysed 149,116 transactions and 214,470 units sold.
- Evaluated transaction value, selling price and units per transaction as indicators of commercial performance
- Identified monthly revenue growth and changes in performance across the six-month period Assessed product and category concentration to understand the core revenue drivers.
- Compared store revenue and contribution to assess the balance of the store network. Investigated trading periods to identify peak and lower-revenue opportunities.
- Developed cross-platform dashboards using Excel, Data Studio, Power BI, Lovable and Databricks.
- Translated analytical findings into commercial opportunities across product, pricing, volume and mix.
- Developed recommendations using a Test → Measure → Optimise approach.

THE OUTPUTS

- **Commercial Performance**
Understanding how revenue, transactions and units are performing across the business.
- **Product & Category Analysis**
Identifying the products and categories contributing most to revenue and volume.
- **Store Performance**
Assessing revenue contribution and performance across Bright Coffee locations.
- **Trading Behaviour**
Identifying peak and lower-performing trading periods to support targeted commercial initiatives.
- **Commercial Opportunities**
Converting sales patterns into opportunities across price, volume, mix and transaction value.

THE KPIs

REVENUE PERFORMANCE
REVENUE GROWTH

TRADING-PERIOD PERFORMANCE

A decision-ready view of where Bright Coffee is generating revenue, what is driving performance, and where commercial interventions can be tested to support further growth.

THE OUTCOME

BRIGHT COFFEE PRODUCT PERFORMANCE ANALYSIS

PRODUCT SCOPE	TOTAL RECORDS	PRODUCT VARIATION	TOTAL REVENUE
Product Type + Product Detail	149,116	29	698,812.33

WHAT IS HAPPENING

The growth trajectory is clear, but revenue alone does not explain the commercial outcome. The analysis therefore separates transaction value, unit volume and selling price to establish the economics behind the headline growth.

ANALYTICAL INTERPRETATION

- Average transaction value: R4.69
- Average selling price: R3.26 per unit
- Average units per transaction: 1.44

These metrics establish the baseline for assessing whether future growth is coming from more customers, larger baskets, higher prices or changes in product mix

The executive view establishes the scale of performance.

NEXT QUESTION

Which products and categories are creating the revenue base?

BRIGHT COFFEE PRODUCT PERFORMANCE ANALYSIS

TOTAL RECORDS	PRODUCT CATEGOR...	PRODUCT VARIETY	UNITS SOLD	TOTAL REVENUE
149,116	9	29	214,470	698,812.33

REVENUE BY PRODUCT TYPE

PRODUCT CATEGORY

REVENUE VS UNITS SOLD

WHAT IS DRIVING PRODUCT PERFORMANCE?

Coffee and Tea together contribute approximately 66.7% of revenue. This indicates that the two products are carrying a significant share of commercial value in the business

ANALYTICAL INTERPRETATION

Product performance should be assessed through both revenue and volume. High-volume products can support traffic and basket-building, while high-revenue products help protect the value of the current sales mix.

- Coffee is the largest revenue category at R269.95K, contributing approximately 38.6% of total revenue.
- Tea contributes R196.41K (28.1%), while Bakery contributes R82.32K (11.8%).

The commercial question is therefore not simply "what sells?" but what combination of volume, price and mix creates the greatest value?

Product analytics explains what is selling.

The next question

where that value is being created and whether store performance is balanced

WHAT DOES THE COMMERCIAL PERFORMANCE MEAN?

Revenue growth 103.8%
Jan → Jun

Average selling price R3.26
Revenue ÷ units

Units / transaction 1.44
Units ÷ transactions

Hell's Kitchen contribution 33.8%
Store revenue ÷ total

ANALYTICAL INTERPRETATION

The store base is commercially balanced: Hell's Kitchen contributes 33.8%, Astoria 33.2% and Lower Manhattan 32.9% of total revenue.

This reduces dependence on a single location and shifts the focus toward improving transaction economics and product mix across the network.

LOVABLE — STRATEGIC RESPONSE

01

PEAK PERIODS

Maximise high-demand trading windows

The 09:00–12:00 period is the strongest three-hour trading window, generating R220.2K in revenue.

Action: Protect availability and operational readiness during peak demand, ensuring high-demand periods are positioned to capture the strongest possible revenue.

02

WEAKER PERIODS

Test interventions where demand is lower

The 18:00–21:00 period is the weakest trading window, generating R65.7K in revenue.

Action: Use lower-demand periods as controlled test environments for targeted offers, bundles or promotions designed to stimulate demand..

03

CUSTOMER BEHAVIOUR

Use trading patterns to shape commercial decisions

Demand is not evenly distributed across the trading day, creating different customer-behaviour opportunities across time periods.

Action: Align promotions, staffing, product availability and customer initiatives to the behaviour observed in each trading window..

Treat each time-based intervention as a testable hypothesis — pilot, measure the response, then scale what works.

DATABRICKS — SALES TRENDS & OPPORTUNITIES

Revenue more than doubled across the six-month period, rising from R81.7K in January to R166.5K in June.

The strongest month-on-month acceleration occurred from April to May (+31.8%), followed by a further 6.2% increase into June.

OPPORTUNITY FRAMEWORK

PROTECT & SCALE

Coffee + Tea represent ~66.7% of revenue. Protect proven demand while testing adjacent offers around the core categories.

GROW

Lift transaction economics through bundles and cross-sell, with the current 1.44 units per transaction as the baseline to improve.

OPTIMISE

Use the 09:00–12:00 demand pattern to inform weaker-period promotions, staffing and product availability decisions.

REVIEW

Review lower-contribution products through revenue, volume and price together before considering changes to range, placement or promotion.

PRICE × VOLUME × MIX

The next analytical layer is to decompose growth into more units, higher prices and changes in product mix — turning revenue growth into a clearer commercial driver analysis.

CEO TAKEAWAY

BRIGHT COFFEE'S OPPORTUNITY

Bright Coffee generated R698.8K in revenue from 149,116 transactions and 214,470 units. Revenue more than doubled from January to June, while Coffee and Tea emerged as the dominant revenue categories.

The opportunity is to understand and strengthen the commercial drivers behind that growth.

UNDERSTAND

Revenue grew 103.8% from January to June, with average transaction value at R4.69.

IDENTIFY

Coffee and Tea account for approximately 66.7% of revenue, while the three stores remain relatively balanced in contribution.

ACT

Use bundles, cross-sell and targeted offers to improve transaction economics from the current 1.44 units per transaction.

MEASURE

Track revenue growth, transaction value, price, volume, mix and store contribution to evaluate each commercial intervention.

UNDERSTAND → IDENTIFY → ACT → MEASURE → OPTIMISE

Finance note: EBIT, EBITDA, gross margin and return ratios require cost, expense, asset and equity data that is not present in the sales dataset.
